

MISSISSIPPI COLISEUM

JACKSON, MISSISSIPPI

The Mississippi Coliseum, located on the grounds of the Mississippi State Fairgrounds complex in Jackson, was designed by Jones & Hass Architects of Jackson, and completed in 1962. The steel-framed, 25,000-square-foot arena provides for 6,500 permanent seating, and with an interior arena height of 70 feet, the coliseum has been used for numerous types of indoor events including conventions, stock shows, circuses, athletic contests, and ice skating. Due to the effects of time and our ambient environment, the concrete columns needed repair and restoration. Steel corrosion, concrete carbonization, and existing coating deterioration were widespread, leading to a full inspection, survey, and restoration of the exterior concrete structure. United removed 100% of the existing coating, inspected the concrete structure, completed concrete spall repairs, and recoat the concrete with an anti-carbonation coating.

CATEGORIES

- Concrete / Structural Restoration
- Exterior Painting / Coating

HIGHLIGHTS

- Duration 4 Months
- Completed January 2020
- Contract \$ 690,269
- Client State of Mississippi
