

THE WESTIN

NEW ORLEANS, LOUISIANA

Following a rain drenching tropical storm, The Westin in New Orleans contacted United Restoration to help with water leaking issues that had affected a large portion of their building. The leaks had caused closure of an entire stack of rooms. United initially reacted with an emergency response crew, in order to correct obvious exterior deficiencies and replace all interior finishes on 18 units in a span of four days.

We then set forth with Arnold and Associates to complete a full skin renovation that included, window flashing and sealant replacement, through wall flashing, stucco removal and replacement, sheathing repairs, extruded silicone at high movement joints and the application of a new architectural finish and design. All of this was completed while keeping the high-end hotel operating at full capacity.
