

UT WHITE HALL

KNOXVILLE, TENNESSEE

Less than two years after it opened to residents, White Hall on the University of Tennessee campus was closed unexpectedly to allow for repairs. United Restoration was retained by the University to remove the existing masonry façade of the Residential Building. Once the building's exterior was safely removed and the Engineer of Record evaluated the causation of the problem, and a new façade support structure system was developed. The recladding included the removal of all existing shelf angles, wall ties, and associated flashings. Considering the shelf angle was to be anchored to a wood lumber structure, the new shelf angle system included the engineering and testing of the new system on site during construction. The façade received a full installation of Tyvek building wrap prior to final brick cladding and fiber cement board panels. Final touches also included all new sealants, gutters, and downspouts.

SERVICES PROVIDED

- Façade Restoration
- Masonry Restoration
- Sealants / Waterproofing

PROJECT INFO

- Duration 16 Months
- Completed November 2018
- Contract \$ 10,284,000
